Profile

Computer Science student with 3+ years of experience, passionate about software development and building practical applications. Experience in building responsive web applications, integrating apis, translating UI/UX designs into production-ready interfaces. Skilled in HTML, CSS, JavaScript, React and GitHub. Eager to contribute to real-world projects through involvement in real applications.

Skills

Front-End Development

HTML, CSS, JavaScript, React, Tailwind
CSS, Typescript, Shadcn, GitHub

Leadership & Communication

Coordinated administrative tasks and communications skills

Projects

Authentication-based ToDo App, Vanilla JS, Async JS

- Built a to-do task management application using **Vanilla JavaScript** with token-based authentication powered by the **Reqres.in** [API](#).
- Implemented protected pages, login and logout flows, asynchronous API handling, debounced input validation, and dynamic UI updates.

Github: <https://github.com/SheksDev/Sheks-ToDo-App> [↗](#)

Kanban Task Management Web App

- Built a fully interactive Kanban-style task management application that allows users to create, edit, move, and delete tasks across multiple workflow stages. Implemented dynamic DOM manipulation, responsive UI design, and local storage to ensure tasks persist across sessions. Focused on clean code structure and user-friendly functionality.

To-Do Application (Authentication-Based), Firebase Authentication

- Built a to-do application to practice real-world authentication workflows
- Implemented Firebase Authentication to replace a mock API (reqres.in [↗](#))
- Added show/hide password feature to improve user interaction and error handling

- Implemented loading indicators to enhance user experience during authentication
- Improved the application by refactoring earlier implementations

Bulk Transaction Upload

Currently involved in building a banking platform that uploads, validates, and submits bulk transactions to core banking.

PMO Portal

Ongoing/Private - A portal built and integrated using React & Tailwindcss for frontend, while Prisma and Express for backend, where projects of a company are managed and tracked while taking each projects through 8 life cycle stages. There are two users, the head of ops and project manager. The workflow, the project manager gets to submit a project current stage for approval when all checklist and supporting documents has been uploaded, while the head of ops either approves that project stage or reject it.
